

Introducing EBS INTEGRATION KIT for Ping Identity

Enhance Your Ping Investment with EBS INTEGRATION KIT

The **EBS INTEGRATION KIT** from LikeMinds Consulting provides a simple deployment path for enterprises using Ping Identity to enable single sign-on (SSO) to Oracle E-Business Suite. It eliminates your dependency on other Oracle components for identity and access management (e.g., Oracle EBS AccessGate, Oracle Internet Directory, etc.) without compromising the security and scalability of your business-critical Oracle EBS environments.

How Does the EBS INTEGRATION KIT Work?

Features

- Works seamlessly with PingFederate (and PingAccess, if you choose a header-based approach)
- Integrates without the need for additional Oracle components like Oracle Internet Directory or EBS AccessGate
- Provides flexibility to install on PingFederate server or any J2EE container
- Supports Just-In-Time provisioning

Benefits

- Helps achieve a painless integration of modern IAM into your existing architecture
- Enables you to modernize or migrate off of legacy Oracle IAM without disrupting critical access to Oracle E-Business Suite
- Frees you from lock-in with Oracle IAM licensing—you only need your EBS license
- Requires no additional hardware

Specializations

Ping SSO Integration with Oracle Fusion Middleware and Oracle Applications:

- Oracle E-Business Suite (EBS)
- Siebel
- PeopleSoft
- On-premises or On-demand Cloud Deployments
- And more...

Managed Services

24/7 Managed Support Services for your Ping SSO environment:

- Patch Management
- Application Updates
- Incident Management
- Alerting & Reporting

Value and Commitment

From strategy to implementation to support, let LikeMinds Consulting help you realize your IdM vision.

We are committed to helping you achieve maximum benefit and ROI of your Ping investment.
